

Ollama + Gemma4-26b + myAgent 安裝步驟

- 在群聯機器上安裝 & 啟動 ollama + gemma4 步驟

```
# 生成 ollama container
# (這步已做過了, 學員不用做)

docker run -d --gpus=all \
    -v ollama:/root/.ollama \
    -p 11434:11434 \
    --name ollama \
    ollama/ollama:0.30.2
```

```
# 啟動container (這步學員要自行輸入)
```

```
docker start ollama
```

```
# 運行模型 (這步學員要自行輸入)
```

```
# 這步會下載 gemma4:26b model, 由於之前已下載過, 應該會很快走過
```

```
docker exec -it ollama ollama run gemma4:26b
```

```
# 等10秒鐘, 要等到 "success" and "Send a message"....) 就可以開始用了
```

```
# 可以按 CTRL-P + CTRL-Q 離開container 畫面)
```

可以用curl 測試一下

```
curl http://localhost:11434/v1/chat/completions \
  -H "Content-Type: application/json" \
  -d '{
    "model": "gemma4:26b",
    "messages": [
      {"role": "system", "content": "You are a helpful assistant."},
      {"role": "user", "content": "hello?"}
    ],
    "temperature": 0.7
  }'
```

- 安裝myAgent

```
# 下載 myAgent docker image (這步學員不用做)
```

```
docker load -i ./my_agent_image.tar
```

```
# 下載myAgent repo (這步學員不用做)
```

```
cd ~/Documents
```

```
git clone https://github.com/wennycooper/myAgent.git
```

```
# 產生 myAgent container (這步學員不用做)
```

```
docker run -it --name myAgent \
  -v ~/Documents:/workspace \
  --net host \
```

```
-w /workspace/myAgent \  
my_agent:latest bash
```

啟動 myAgent container, 執行agent (這步需要由學員操作)

```
docker start myAgent  
docker exec -it myAgent bash
```

接下來執行agents/ 底下的各個程式

例如

```
python agents/s01_agent_loop.py
```
